

HIMANSHU BHAT

DevOps Engineer | Cloud Infrastructure Engineer

Pune, India | himan.bhat10@gmail.com | +91 9049511778 | [LinkedIn](#) | [GitHub](#)

CI/CD Automation · Infrastructure as Code · Cloud Provisioning · Container Orchestration · Monitoring & Reliability · Linux Administration

PROFESSIONAL SUMMARY

DevOps Engineer with 1+ year of hands-on experience provisioning and automating cloud infrastructure on AWS. Proficient in Terraform IaC, GitHub Actions CI/CD pipelines, Docker containerisation, and Linux system administration. Experienced in building reliable, scalable, and zero-downtime deployment workflows for production environments. AWS re/Start certified.

EDUCATION

B.Tech Computer Science — Ajeenkya D Y Patil University, Pune

Aug 2022 – Aug 2026

TECHNICAL SKILLS

Cloud & Infrastructure: AWS — EC2, S3, IAM, VPC, RDS (MySQL), ALB, Auto Scaling, CloudWatch, Security Groups

DevOps & CI/CD: Terraform (IaC), GitHub Actions, Docker, Docker Compose, Nginx (reverse proxy), SSH

Monitoring & Reliability: CloudWatch Alarms, Dashboards, Log Groups, SNS Alerts, Remote State (S3 + DynamoDB lock)

Scripting & OS: Python, Bash, Linux (Ubuntu) — CLI, cron, systemd, process management, log parsing

Networking & Security: TCP/IP, DNS, Subnetting, Firewalls, Security Groups, SSL/TLS, Port Scanning, IAM Policies

Tools: Git, GitHub, Linux CLI, SSH, Agile, Kanban

INTERNSHIP EXPERIENCE

Cloud & DevOps Intern — Exlearn Technologies LLP, Pune

Jan 2025 – Jan 2026

- Identified configuration drift across EC2 instances as a root cause of deployment failures — authored Terraform IaC modules to provision VPC, IAM, S3, and RDS reproducibly, eliminating drift entirely and cutting environment setup time by ~50%.
- Engineered a GitHub Actions CI/CD pipeline to automate build, test, and deploy stages end-to-end — replaced manual release steps, reduced deployment effort by ~40%, and achieved consistent, auditable delivery on every commit to production EC2 instances.

Website Developer — Blendskills, Pune

May 2024 – July 2024

- Managed Hostinger-hosted environments and proactively implemented security hardening, caching, and asset compression — sustained 99.9% uptime across the engagement with zero critical incidents.
- Identified and resolved recurring plugin conflicts and performance bottlenecks on live WordPress deployments — patched theme templates and tuned hosting configuration, improving page load speed and cross-browser stability.

PROJECTS

Production 3-Tier AWS Infrastructure with IaC & CI/CD | Terraform · EC2 · VPC · ALB · Auto Scaling · RDS · IAM · S3 · CloudWatch · GitHub Actions

- Architected and provisioned a complete 3-tier AWS environment using Terraform modules — custom VPC with public/private subnets, ALB, EC2 Auto Scaling group (CPU >= 70% threshold), private RDS MySQL with Multi-AZ failover — achieving a fully reproducible infrastructure with zero manual steps.
- Configured least-privilege IAM roles across all tiers, stored Terraform remote state in S3 with DynamoDB locking to prevent concurrent conflicts, and integrated a GitHub Actions pipeline to validate plans on every PR and apply changes automatically on merge.

Containerised Full-Stack Deployment Pipeline | Docker · Docker Compose · Nginx · GitHub Actions · AWS EC2 · FastAPI · PostgreSQL

- Containerised a multi-service application (FastAPI + PostgreSQL + Nginx) using Docker Compose to eliminate environment parity issues between local dev and production — deployed to EC2 via a GitHub Actions pipeline triggered on every push to main.
- Configured Nginx as a reverse proxy with SSL termination for secure external routing; set up CloudWatch log groups and health-check alarms to detect service degradation, enabling zero-downtime rollouts and rapid incident response.

Network Security Tool (Python-based Port Scanner) | Python · Socket Programming · TCP/IP · Multithreading · JSON

- Built a Python network scanner using raw socket programming to probe TCP/UDP port ranges, identify active services via banner grabbing, and flag exposed or misconfigured endpoints — deepening practical knowledge of TCP/IP internals and attack surface analysis.
- Implemented concurrent scanning with Python threading, reducing scan time by ~60% over sequential probing; structured output as JSON for direct integration with security audit pipelines and logging tooling.

CERTIFICATIONS

AWS re/Start Graduate — Cloud Foundations, EC2, IAM, Linux Administration, Networking, Security

Cloud & DevOps Mastery Program — CI/CD Pipelines, Docker, Terraform, Kubernetes, Deployment Automation

EXTRACURRICULAR

- Elected President of Qurians Club — led a 15-member technical team, restructured club operations with delegated domain leads, and organised placement preparation drives attended by 100+ students.
